Fish Screening Assays for Endocrine Disruption

Work Assignment 2-12
(3-04-02)

The Detailed Review Paper (DRP) provides an overview and scientific basis for a fish reproductive screening assay. A description of candidate protocols and information gaps is also given. This DRP will be discussed at the Third Plenary Meeting of the EDMVS in March. A fish reproduction assay is proposed to be included in the Tier 1 Screening Battery and meets essential criteria for the Battery. The EDMVS is invited to comment on the DRP and consider the following questions:

1. Does the DRP provide adequate background and rationale to support further validation of a fish reproduction assay for screening potential endocrine disrupting chemicals?
2. Does the EDMVS have suggestions to improve the DRP?
